

BEST EXECUTION POLICY

SpareBank 1 SMN ("**SMN**") is SpareBank 1 Markets AS ("**SB1 Markets**") Mother Company. Some Clients will establish a customer relationship with both SMN and SB1 Markets when purchasing investment services. The two companies have decided to establish a common best execution policy. This document therefore applies both for Clients that solely have a customer relationship with SB1 Markets, and for Clients that have a customer relationship with both companies.

1. INTRODUCTION

SB1 Markets shall in accordance with the Norwegian Securities Trading Act, the Norwegian Securities Trading Regulation and Commission Delegated Regulation 2017/565, take all sufficient steps to obtain the best possible results for their clients when executing a client's order ("**Best Execution**"). This requires SB1 Markets on (i) receipt and transmission of orders on a client's behalf, and/or (ii) execution of orders on a client's behalf, to perform a precise assessment of the execution of the order to achieve Best Execution, with reference to any specific instructions from the client and the nature of the order and the relevant markets.

The policy for this assessment will be these guidelines for order execution policy (the "**Policy**"). The duty to ensure Best Execution does not entail that SB1 Markets has any portfolio management responsibility on behalf of the client beyond the specific duties that are imposed by law, or are otherwise agreed with the client.

Further, SB1 Markets' duty to achieve Best Execution will be dependent on how specific and concrete the respective order is (see further details in section 2). An order is considered as received, and SB1 Markets will be in a position to trade on the client's behalf, when an instruction on order execution giving SB1 Markets a contractual or transmission obligation to the customer is received. With the placement of a non-specific order, the client entrusts SB1 Markets to protect their interests in relation to price and other factors in a transaction, which can be affected by the choices the broker takes when executing the order.

In order to achieve Best Execution SB1 Markets will, as far as possible, make use of the same standards regardless of which financial instruments are traded and in which market place the client's orders are executed. Diversity in the markets and instruments, as well as the various types of orders and volume, will however lead to different factors being taken into account. SB1 Market will draw particular attention to the fact that price volatility in certain markets can mean that the timeliness of execution is a priority, whereas in other markets with low liquidity, execution of the order in itself will constitute Best Execution. Choice of market place can also be limited; it might occur that it is only one actual market to execute an order.

The Policy does not cover settlement (handling of delivery and payment) after execution of an order, but relate to the order execution itself. If financial settlement of a transaction is completed by another investment firm, SB1 Markets' Policy will still fully apply for the order execution.

In accordance with an agreement between SB1 Markets and SMN, SMN is responsible for settlements regarding interest rate and foreign currencies transactions conducted by SB1 Markets.

2. EXCEPTIONS FROM THE POLICY

The Policy applies when SB1 Markets executes orders on behalf of clients. When SB1 Markets publishes rates or quote prices, at which SB1 Markets finds it acceptable to sell or buy for (price-driven markets), this is not considered as an execution of an order. The same applies when SB1 Markets and the client agree a price on a transaction, where SB1 Markets is the counterparty and is exposed to risk.

2.1 Facilitation of client trades/market-making

When SB1 Markets quotes a price for trade of certificates, bonds, currency, and for trade in currency-, interest rate- and commodity derivatives, and the client wishes to act on quoted price, the trade will normally not be regarded as an execution of an order on behalf of the client, and the requirement for Best Execution will therefore not apply. If trade in financial instruments, which normally are traded in price-driven markets is carried out through an ordinary execution, the Policy will still apply for such part of the order.

2.2 Specific to equity derivatives

If SB1 Markets quotes a price for equity derivatives, the trade will normally be exempted from the requirement for Best Execution in connection with execution of the order. On receipt of the order for purchase or sale of equity derivatives registered on Oslo Børs, SB1 Markets will compare the price we can offer with the price that is available on Oslo Børs, and give the client the best price. For equity derivatives listed on Nasdaq OMX Stockholm, SB1 Markets will trade through our partners.

2.3 Specific instructions

If the client gives specific instructions regarding the whole or parts of the order, for example as to limit, best, choice of execution venue etc., the order will as far as possible be executed in correspondence with the client's instructions. Where an order or a part of an order is executed in relation to specific instructions, this is regarded as Best Execution, cf. Commission Delegated Regulation EU/2017/565 article 64 no. 2. When a specific instruction concerns only parts of the order, this Policy will apply for the remaining part of the order.

Orders placed by the client themselves using a self-service trading solution, for example the trading service in SpareBank 1 online banking or DMA, will be regarded as a specific instruction given by the client, which shall be executed by SB1 Markets in relation to this.

3. DETAILS ON THE POLICY FOR BEST EXECUTION

3.1 Relevant factors

SB1 Markets will take regard of the following criteria when ensuring best execution:

- Price
- Costs
- Speed of the execution
- Likelihood of execution and settlement
- The size of the order
- The order`s nature and type
- Other relevant criteria relevant to the execution of the order (such as likely market impact)

3.2 Consideration of relevant factors

When weighing up the above mentioned factors (section 3.1) against each other, the following criteria should be taken into consideration:

- the characteristics of the client, including categorization of the client as retail or professional
- the characteristics of the client order, including where the order involves a securities financing transaction
- the characteristics of the financial instruments that are subject to the order
- the characteristics of the execution venues to which the order can be directed

With regards to execution of orders for retail clients, the total amount to be paid by the client will normally be the decisive factor for the choice of execution. This entails that the criteria of speed, likelihood of execution and settlement, the size and nature of the order, market impact and any other implicit transaction costs will be given precedence over the immediate price and cost consideration only if SB1 Markets considers that that these criteria are instrumental in delivering the best possible result in terms of the total consideration to the retail client. When determining the total amount, SB1 Markets shall take into account the price of the financial instrument and the costs relating to the execution including direct clearing and settlement fees, other fees paid to third parties involved in the execution of the order.

If the order is of such volume that SB1 Markets consider it likely that it will affect the pricing of the instrument in the market, SB1 Markets can execute the order fragmented and over time if the broker consider it suitable to achieve Best Execution on behalf of the client.

3.3 Alternative methods for execution of orders

In order to meet SB1 Markets` duty to carry out all reasonable measures to achieve Best Execution for the client, SB1 Markets will use one or more of the following marketplaces when we execute customer orders.

3.3.1 On a regulated marketplace, multilateral trading facility ("MTF"), organised trading facility ("OTF"), systematic internaliser or market maker:

- a. by submitting the client's order to an execution venue where SB1 Markets is a member, or has access through Smart Order Routing (SOR). SB1 Markets points out that market places are in constant change and development. SB1 Markets reserves the right at any given point in time to discontinue the use of or take in use other markets and MTFs.
- b. by placing the order with another investment firm if SB1 Markets does not have access to the relevant execution venue. SB1 Markets will ensure that the other investment firm's guidelines is compliant with our Best Execution policy.

3.3.2 *Outside a regulated venue or MTF:*

- c. By buying from or selling to other clients (client- to client trading). If SB1 Markets has received orders for both purchase and sale of the same financial instrument, and these orders can be matched internally, SB1 Markets will usually place the orders in the trading system where the financial instrument is listed. The trading system will automatically perform a matching of the orders to the market price. Alternatively the orders will be executed by SB1 Markets itself concluding the contract on behalf of the clients. SB1 Markets will then protect the client's interests with the same care as otherwise, and set the price on the basis of the rate on the stock exchange, or if stock exchange rates are not available, a rate which is reasonable in light of the market position.
- d. by becoming, in whole or in part, a counterparty (trading on own-account). If SB1 Markets or SMN is counterparty, this will be stated on the contract note or other confirmation. If SB1 Markets or SMN becomes a counterparty (trading on own account) in relation to a client order, this will take place at a price which is equal to the best achievable price in a trading system, such as the stock exchange price. Exceptions will apply if SB1 Markets, in its capacity as a Market Maker and when asked directly by a client, quotes a price at which we are prepared to either buy or sell the relevant financial instruments, and the client accepts this price. When SB1 Markets act as a counterpart in non- cleared transactions, the client will obtain counterparty risk to SB1 Markets.
- e. by placing the order with another investment firm with which SB1 Markets collaborates with.

3.3.3 *Relevant execution venues*

SB1 Markets is a member on following regulated trading venue and MTF:

- Oslo Stock Exchange
- Oslo Axess
- Nordic ABM

SB1 Markets has access to all of the most relevant MTFs and dark pools through our SOR, please see the appendix for more information.

In addition, SB1 Markets will also itself constitute an execution venue for the execution of orders from clients when SB1 Markets executes orders by trading on own account on behalf of clients acting as an execution venue i.e. as a systematic internaliser, market maker or liquidity provider.

If circumstances arise where relevant markets are not given in advance, SB1 Markets will consider which market(s) on the list will most probably provide Best Execution for our clients. For certain financial instruments there will be only one possible market for execution of the order. Which markets are available for execution of an order in a self-service trading solution for securities, depends on the service offered.

In certain circumstances orders will be executed outside regulated markets or MTF if SB1 Markets finds that this will provide Best Execution for the client.

If the financial instrument is traded on several execution venues, the order will primarily be sent to the market via SOR and thus the primary execution venues will be Oslo Stock Exchange/Oslo Axess. This entails that the order will be executed on the regulated market, MTF or OTF, where the best price is available. Nevertheless, before the order is sent to the venue, SB1 Markets will investigate whether liquidity and better prices are available in any "dark pools" which SB1 Markets has access to. If SB1 Markets considers that a trading venue with higher liquidity, in connection to the actual financial instrument, will provide Best Execution for the client, SB1 Markets will seek to execute the order at this venue.

SB1 Markets will based on this Policy, execute the clients order on the best-suited marketplace.

For the circumstances that SB1 Markets transmit or place orders through another investment firm, the quality on their executions is monitored, and if necessary, any deficiencies will be corrected.

3.4 Specific to trading unlisted shares

If an unlisted share (or other financial instrument) is registered on the Norwegian OTC-list (NOTC-list), SB1 Markets will enter the order as an interest in the NOTC-system and then make contact with another firm that has registered a corresponding interest in the OTC system. SB1 Markets will negotiate with this firm in order to achieve the best possible price on behalf of the client.

3.5 Specific to trade in interest and currency markets

SB1 Markets collaborates with SMN in connection with trade in the interest rate and currency markets. This entails SB1 Markets managing all contact with the client, including receipt, transmission and completion of orders. After a trade is closed SMN Markets will manage the financial settlement of the trade.

For trading in foreign currency SB1 Markets and SMN make use of the following counterparties:

- Deutsche Bank
- UBS
- Barclays
- JP Morgan
- Nordea

4 TIMING OF ORDER EXECUTION ETC.

Unless a specific instruction from the client is provided, SB1 Markets shall normally disclose and commence the execution of the order immediately upon receipt of the order. This entails that SB1 Markets will process incoming orders based on time priority, unless it is deemed that Best Execution will be achieved by combining the order with other orders, so called aggregating of orders. SB1 Markets reserves the right to aggregate the client's order with orders from other clients, retail or professional, which may or may not be connected to SB1 Markets. Aggregation of orders may take place if it is unlikely that aggregation in general will be disadvantageous to any of the clients. However, the client should be aware that the aggregation of orders may in certain circumstances be disadvantageous.

Further, SB1 Markets reserves the right to aggregate the client's order with transactions carried out for SB1 Markets own account. If the combined order can only be partly executed, the client's order will generally be prioritised over that of SB1 Markets. Exceptions will apply if SB1 Markets could not have executed the order with equally advantageous terms without aggregation. Further information on aggregation of clients' orders can be found in the general terms and conditions for trade with financial instruments through SB1 Markets, clause 7.3.

If the order is received outside the market's opening hours, the order will normally be executed when the market reopens.

5 MARKET DIVERSITIES

If any interferences occurs at the marketplaces or in the trading system (e.g suspension, annulations etc.), SB1 Markets can execute in other ways than described above, if SB1 Markets consider this most likely to give the client Best Execution. The marketplace and/or the trading system can cancel or make changes to a trade executed in their system. SB1 Markets cannot be responsible for such cancellation or change, regardless if the client has received oral confirmation from the broker or contract note from SB1 Markets.

6 MONITORING AND REVIEW

To identify, and where appropriate correct deficiencies, SB1 Markets will monitor the effectiveness of the Policy, and regularly assess how often the marketplaces covered by the Policy lead to Best Execution for our clients and to what extent it is necessary to make changes in the execution policies taking into account the information published by relevant execution venues and by SB1 Markets in accordance with the Commission Delegated Regulations EU/2017/575 and EU/2017/576. SB1 Markets will evaluate the Policy at least once a year, and/or when significant changes occurs which affect SB1 Markets' continued ability to achieve Best Execution for the client. The prevailing policy,

together with a list of marketplaces used, is available at www.sb1markets.no. Further information on this will not be sent out to our clients.

Appendix

Equity and equity- like instruments:

This appendix explains our best execution processes for the following equity and equity-like financial instruments:

- Shares
- Equity Certificates
- Depositary receipts
- Warrants
- Exchange traded funds (ETF)
- Exchange traded notes (ETN)

How SB1 Markets handle client orders:

When SB1 Markets executes client orders in equity and equity- like instruments we can do so by act as either an agent or a principal. All orders will normally be sent through our Smart Order Router (SOR), unless other is specified by the client. The SOR has access to the following execution venues:

- Nasdaq.OMX Copenhagen
- Nasdaq.OMX Stockholm
- Nasdaq.OMX Helsinki
- Oslo Stock Exchange
- Nasdaq OMX First North (Sweden)
- Nasdaq OMX First North (Denmark)
- Nasdaq OMX First North (Finland)
- Aktietorget
- SEBX
- Oslo Axess
- Merkur
- Norwegian over the counter market
- NGM Equity
- NGM -Nordic MTF
- Nasdaq.OMX Riga
- Nasdaq.OMX Tallinn
- Nasdaq.OMX Vilnius
- Nasdaq.OMX Iceland
- BATS Europe
- Chi-X Europe
- Turquoise
- UBS MTF
- ITG Posit
- Sigma X
- Instinet Blockmatch
- Liquidnet
- Smartpool
- Deutsche Börse – Xetra
- NYSE Euronext Amsterdam
- NYSE Euronext Brussels
- NYSE Euronext Paris
- NYSE Euronext Lisbon
- London Stock Exchange
- SIX (Swiss Exchanges)
- Borsa Italiana
- Irish Stock Exchange
- Madrid Stock Exchange
- Vienna Stock Exchange
- Nasdaq
- American Stock Exchange
- New York Stock Exchange (NYSE)
- Toronto Stock Exchange

SB1 Markets points out that market places are in constant change and development. SB1 Markets reserves the right at any given point in time to discontinue the use of or take in use other markets and MTFs.

The SOR will route the order to the venue that will give the best price.

If SB1 Markets receives orders for both purchase and sale of the same financial instrument, these orders can be matched internally in accordance with the client's interest and current regulations.

In addition, SB1 Markets will also itself constitute as an execution venue for the execution of orders from clients when SB1 Markets executes orders by trading on own account on behalf of clients acting as an execution venue i.e. as a systematic internaliser, market maker or liquidity provider. In these situations, SB1 Markets will act as a principal. When SB1 Markets responds to a request for quote (RFQ), the respective price will depend on market situation, order size, liquidity etc.

When a professional client trade based on a quote provided by SB1 Markets, the initial assumption will be that the client do not legitimately rely on SB1 markets to provide best execution. This assumption will be checked against the so-called four-fold cumulative test, published by the European Commission to establish whether the obligation to best execution is relevant. The four-fold cumulative test encompasses the following criteria:

- Which party initiates the transaction. If the client initiates a transaction it is less likely that the client will be relying on us to provide best execution.
- Questions of market practice and the client's capacity to trade other places.
- The relative levels of price transparency in the market.
- The information provided by SB1 Markets and any agreement reached between the client and SB1 Markets may impact on whether best execution is obliged.

For retail clients, the result of the four-fold cumulative test will normally be that you are entitled to best execution when you trade based on a quote provided by us.

How to place an order:

Clients can send orders electronically via SpareBank 1 online banking solution or manually by phone or chat functions.

Electronical orders will be sent directly through the market in accordance with the client's specifications. Orders that are valid for several days will be withdrawn from the market on a daily basis, and then resent the next morning, unless the client manually ask SB1 Markets to keep the order in the market.

Orders received manually will be sent through the market in accordance with the client's specifications.

SB1 Markets has access to several different type of algorithms that can be used when executing client orders.

Equity derivatives:

This appendix explains our best execution processes for the following equity derivatives:

- Stock options and forwards
- Index options and futures
- Total return swaps (TRS)
- Other tailor- made derivatives

Equity derivatives may be exchange traded- or OTC derivatives.

How SB1 Markets handle client orders:

When SB1 Markets executes client orders in equity derivatives we can do so by act as either an agent or a principal. If a client wants to trade an exchange traded derivative SB1 Markets will seek to quote the best possible price based on several factors like volatility, expected dividend, interest rate, risk margins etc. SB1 Markets will compare the quoted price with observable prices in the market, and if the observable price in the market is better than our quoted price, SB1 Markets will act as an agency and execute the order in the market.

When quoting prices in an OTC derivative, SB1 Markets will seek to quote the best possible price based on the same factors as mentioned above. For such kind of contracts, observable prices may not be available; under these circumstances, SB1 Markets will give a best estimate and act as a principal if the client accepts the price.

Note that from 3rd of January 2017, only professional clients are allowed to trade derivatives through SB1 Markets.

When a professional client trade based on a quote provided by SB1 Markets, the initial assumption will be that the client do not legitimately rely on SB1 markets to provide best execution. This assumption will be checked against the so-called four-fold cumulative test, published by the European Commission to establish whether the obligation to best execution is relevant. The four-fold cumulative test encompasses the following criteria:

- Which party initiates the transaction. If the client initiates a transaction it is less likely that the client will be relying on us to provide best execution.
- Questions of market practice and the client's capacity to trade other places.
- The relative levels of price transparency in the market.
- The information provided by SB1 Markets and any agreement reached between the client and SB1 Markets may impact on whether best execution is obliged.

How to place an order:

Clients can place orders or request for quote manually by phone or chat functions. SB1 Markets will executed the order in accordance with the client's specifications. Exchange traded derivatives will be executed at the execution venue where the instrument is listed. In cases where SB1 Markets does not have access to certain markets orders will be placed with another investment firm. SB1 Markets will ensure that the other investment firm's guidelines is compliant with our Best Execution policy.

Bonds:

This appendix explains our best execution processes for the following bonds, the list is not exhaustive:

- Commercial paper
- Credit bonds
- Covered bonds
- Government bonds
- Hybrid bonds

- Convertible bonds
- High Yield bonds

Bonds are normally traded off exchange. SB1M normally acts on a principal or matched principal basis. Clients trade bonds on the basis of a quote provided by SB1 Markets or by placing an order. This may be done through telephone or electronic channels. The trade is concluded when clients and SB1M agree on a price.

The price quoted will include a margin and this shall cover the costs related to market risk, counterparty risk, funding, capital adequacy requirements, operational costs, taxes, execution venue fees, clearing fees, settlement costs and a profit to SB1M.

Bonds have varying levels of liquidity. Liquidity will affect the price, and may be obtained through SB1M's own book, clients orders or market liquidity.

SB1M will seek to quote a fair price. The price will be based on transaction data and observable prices in the market. The size and nature of the order may affect the price. In some situations there may be limited or no information available about current market prices. In such cases, the price will be based on a best estimate, based on current pricing of similar instruments or issuers.

SB1M also use internal models for pricing. If SB1M does not want to keep the bonds in our inventory, or if we do not hold the bonds, we will seek an interested counterparty in the market. The margin will in these cases reflect the effort made by SB1M.

Executed bond transactions will be monitored and benchmarked against available market data by use of a transaction cost analysis (TCA). Internal policies will ensure that we monitor and follow up outliers.

Interest rate derivatives and FX derivatives:

This document explains the principles applied by SB1M to achieve Best Execution when executing orders in interest rate derivatives and FX derivatives for non-professional clients and for professional clients that are not eligible counterparties.

The policy applies for the following financial instruments:

- FX forwards
- FX options
- Forward rate agreements (FRA)
- Interest rate swaps (IRS)
- Interest rate options

SB1M is required to take all sufficient steps to obtain the best possible result for clients.

The client trades an interest rate derivative or FX derivative by accepting a quote from SB1M. For some of the financial instruments listed above SB1M offers electronic trading. The quote is based on SB1M's internal pricing models and relevant market prices.

For non-professional clients Best Execution is determined in terms of the total consideration. Total consideration consists of transaction costs and the price of the financial instrument.

Professional clients that ask for a quote from SB1M and subsequently accept the quote cannot fully expect Best Execution according to this document.

All client orders are executed with SB1M as counterparty. This implies that all quotes provided by SB1M are at SB1Ms own risk.

The most important determinants for the price of the financial instrument are:

- Observed prices for similar instruments
- FX rates, interest rate curves, interest rate differentials and volatility
- Marked liquidity
- The size and characteristics of the order
- Regulatory factors
- The credit quality of the client

The liquidity of interest rate derivatives and FX derivatives vary over time and across different financial instruments. Market information is calibrated to internal data when necessary to obtain a fair market price.

SB1M executes orders promptly and in the sequence in which they are received. When a client provides specific instructions on order execution, this might prevent SB1M from execution the order according the principles outlined in this document.

SB1M will evaluate the Best Execution requirement by comparing client quotes to market data. Direct comparable market prices will rarely be available, which implies that the evaluation typically will be based on market price estimates.

Considerations related to speed and likelihood of order execution are not relevant, since SB1M provides binding quotes to clients upon individual assessment of each order.

SB1M will periodically publish information on the quality of order execution.
